## Test equipment for mobile inspection stations

Technical roadside inspections are becoming a big issue in Europe since the entry in force of Directive 2014/47/EU. According to the Directive, EU Member States are mandated to perform in every calendar year a total number of technical roadside inspections corresponding to at least 5% of the total number of vehicles registered.

As roadside inspections perform the same test set of periodical inspections, fully-equipped mobile inspection stations are needed to do the job; test equipment like

brake testers, emission testers, headlight testers and so on, are to be carried along to the testing spot anywhere possible and that's not easy if equipment are not somehow fit in terms of portability and operability.

Brake testers are a good example; a roller brake tester can be installed on a trailer providing that suitable ramps allow the vehicle to drive through and enough electric power is available. However, plate brake testers are certainly better fit because of their much lower power consumption and easiness to unload and use right on the ground.

**Assemblad** offers a complete range of equipment perfectly fit for mobile inspection stations: low power consumption car and truck plate brake testers for easy installation; battery-operated, wireless gas analysers, opacity meters and headlight testers for on-the-spot use.

2019 is the year of one of the most important trade shows worldwide, **AUTOPROMOTEC**, which will take place in Bologna, Italy, May 22<sup>nd</sup> to 26<sup>th</sup>
